

# Trolley for on-site fire extinguisher maintenance

## CADDIE BENCH model

### APPLICATIONS

The Caddie-Bench unit was designed for fire extinguisher control and overhaul. It is particularly suitable for on-site checking operations.

### ADVANTAGES

The Caddie-Bench consists of a steel framework and a revolving vice that makes it possible to rotate the extinguisher completely and thoroughly shake the powder.

The 4 polar positions (0°,90°,180° and 270°) enable the whole extinguisher to be checked and serviced.

The unit is also equipped with a toolbox for easy transportation of the necessary equipment.

The special configuration of the three-wheeled trolley allows the unit to be moved up and down stairs easily.

The lower part of the trolley allows extinguishers to be moved easily when work must be carried out in different locations.
